CONCERNED ABOUT MOLD?

Mold Inspections – Clearance Testing - Sampling

Air Samples – An air test requires at least two samples; one outdoor sample for a baseline standard and one indoor sample within every 1000/SF. An air test will indicate what types of mold spores are in the air and quantify a spore count.

Surface Samples – A surface sample is used to identify a type of mold growth only. It will not quantify or tell what is in the air.

***Fees are subject to change without notice**
